ADJUSTABLE HEAD TUBE REAMER

complete set, incl. facer, one reamer to be chosen, holder and spring guide
code 7202800

With this reamer it is possible to face head tubes with various depths. The depth of the reamer is adjustable. The set up depth will be indicated on the corresponding scale. All 3 head set types can be assembled after the head tube was faced. It does not matter, whether you are going to assemble an ahead, semi-integrated or integrated head set, this tool can do all jobs. Each facer is identified by the new description system S.H.I.S. - Standardized Headset Identification System. The description code consists of the type of the headset and the corresponding head tube inner diameter (e.g. EC 34). EC stands for External Cup meaning the classic head set, ZS Zero Stack for semi-integrated head set and IS for Integrated Standard.
